Pred. No. is the number of results predicted by chance to have a core greater than or equal to the score of the result being printed, and is derived by analysis of the cotal score distribution.

RESULT 1

Human beta3 cDNA.

Human, bee sub-unit; beta; analgest; anticovolus absorbit; correbroprovestive, vescuropic; cardiant; neotropic; cytostitic; dermaclogical; gene therapy, voltage-stated sodium channal; pain; elanigation to recover sections in the section of sections and the section of sections and the section of correct sections and the section of correct sections and correct sections are consistent paragonal sections.

Homo sapiens.

WO200063367-A1. 26-0CT-2000. 24-FEB-2000; 2000WO-EP01783.

99US-0129473. 15-APR-1999;

```
Human cDNA sequences and clones derived from human fetal brain, fetal ktüney, melanoma, teetis and amygdala cDNA libraries, useful in genetic screening and therapy.
                                                   Claim 1; Page 174-175; 611pp; English
P-PSDB; ABB05689.
```

The present intrention describes seemallages and computer readable media offectal brain, fortal kindray, malanama, testis and amydala comba fortal brain, fortal kindray, malanama, testis and amydala comba libraries. ABA93702 to ABA93705 represent human cDNA sequences from the present invention which encode the proceins given in ABB06520 to ABB06729. The human cDNA sequences and clones can be used in sequences and clones can be used in gene example they may be used in a variety of applications; for example they may be used in prefit as a variety of applications; for comba first assets the man generic material for implementing large-scale screening strategies and for treating diseases via gene therapy procedures.

These were derived from expressed sequence ags (ESTs) from the organism of interest. They can be used in diagnostics, for foremacies, gene mapping, identification of matterions, to assesse biodiversatity and for mutritional purposes. The present sequence is a CDNA biodiversatity and for mutritional purposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    147
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              148 CICGAACIGGGGAGGICCAGIGGGGTCGCIIAGGGCCCAAAGCCCCCACCCGGCTCCAAA 207

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                          The invention provides a novel heart-like suburust for voltage-gated sedium in channel polypeptide, specifically a sensory neurons specific channel (1895) aubunit. The provel betal-like subunit is useful for producing a therapeutic agent which is useful treating pain in a patient. The subunit can be expressed by standard recombinant meshoology. The present sequipes registers a funant movel action to have been expressed to the subunit can be expressed by standard recombinant meshoology. The present

The invention relates to polymuclaonides (AAKS1455-AAKS1435) and the encoded by relates to polymuclaonide the chibit activity elating to optokine polypetides (AAKS131-AAMS1012) that enclose the chibit activity elating to optokine so ell differentiation or which may induce product to cher optokines in other ell populations. The product borides and polymetides are useful in gene therapy, accines or peptide therapy. The polypetides have various eyochine-like activities, activity immunocollatory excitities, activity in an extra production of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of th

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           880
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              849
(III). (III) is useful for exercating antibodies against it, detecting or quantitating a polypeptide in tissue ase molecular weight markers and as food supplement. (III) and its hinding partners are useful in medical imagina of eitee expressing (III). (I) and (III) are useful for treating disorders involving aberrant protein expression to biological activity. The polypeptide and polymucleotide sequences have applications in the advantage and to produce other types of data and produces dependen on DNA and a proceeding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic formst directly from MIPO at the properties of the bacterial of the content of the printed specification, but was obtained in electronic formst directly from MIPO at the properties of the intercent of the printed specification, but was obtained in electronic formst directly from MIPO at the part of the properties of the intercent of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the printed of the prin

The sequence represents an expressed sequence agg (EST), and is a polymore expresents an expression are polymore or the suverion are all secreted EST sequences and proceins expressively of human transcending the sequences and proceins enrolled from a vortice of the predicted to have useful biological activities which would make the man predicted to have useful biological activities which would make the maintain and animals. Although no supporting date is given suggested scrivities and the matrix almans are refinal thing or suppressing activity. Hematoposess regularing activity, femerate (Chemofinice activity, hamened and think matrix producting processing activity, reseapor/ligand activity, hamened activity and through the activity reseapor/ligand activity, and activity, hamened activity and through the sequences are also stated to be useful for gone districts.

The invention relates to Asolated polymucleotide (I) and probes, polypeptide (II) as useful is a merital as hybridisation probes, polypeptide (II) sequences, (II) is useful it as hybridisation probes, and for chromosome and gene seapens as also used illuig production of (III). The characteristic sequences also used illuight production of (III). The characteristic sequences and (II) are treat disease afterey inchingues to reserve normal activity of (III) or to treat disease afterey inchingues to reserve normal activity of (III) or to treat disease afterey inchingues (III). (III) and (III) or to treat disease afterey inchingues (III) or contain a molecular view inchingues (III) or questification of quantitating a polypeptide in tissue, as molecular viewing inchingues (III) in and (III) are assets in for treating disorders involving aberrant procein expression or biological activity. The polypeptide and polymucleotical sequences have applications of adjacential or general disorders of other traiter to assess biodiversity of any or produce other types of data and produce dependent on DNA and dance in the procession of the invention.

The present invention provides the protein and coding sequences of a number of bunnar reproductive system related aniques. These can be used in the presention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a procesh of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1044 AGGIGGCCTGAACACCTGAGGGACTGGACTCCCATGTTCAGCAATGTCAATGGCATCAG

                                                                                                                                                                                                                                                                                                                                                                              The present invention provides the protein and coding sequences of 973 human testicular antiquens, and frequents of their genemic sequences. The human testicular antiques is the treatment of cardiovacular, urinary spetem, respreductive spetem, immen, respiratory, neurological and agastrointestrail disorders, infections and particularly cancer, sepecially testicular encers. The present sequence is a DNA encoding a protein fragment of the invention.

The invention relates to polymucleotides (AMCS1456-AMCS3435) and the encoded polypscides (AMMS1823-AMMS0301 that exhibit activity elating to cytochies, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell polatations will perform the polymptides are useful in gene therapy. Vaccines or polymucleotides and polymptides are useful in gene therapy. Vaccines or e.g. seem cell growth factor activity, imanacopolesus regulating activity, interpolation scrivity and may be useful in the diagnosis and/or treamment of context, lower by even may be useful in the diagnosis and/or treamment of context, lower by even disorders, arthitis and sitilament of context lower precom disorders, arthitis and sitilament.

The invention relates to human polynucleotides (AKT9991-AK19981) and the encoded proteins theofonto-Ak1910) that earthly early elating to evroking relation or eal differentiation or which may induce production of other ordorines in other cell polariations which may induce polynucleotides and polypeptides are useful in gene therapy, vaccines or polynucleotides and polypeptides are useful in gene therapy, vaccines or special characteristics, the entity is entity in the entity in the entity in the control of the entity in the control of the entity in the diagnosis and/or extended to cancer, leakaemia, nervous system disorders, arthitis and inflammation.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing

The special code is a state process, and other seasony on preceptive nerve impulsees, in the cerebilishment and endurance of mood, neurodegenerative and alege discorders, and in the control of wateries contraction, including movements such as the heartheast, dispession and vascular rection, including movements such be used in predictive medicine, ecreening and diagnostic assays, and in pharmacogeneatics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New rat sodium channel beta-3 subunit gene isolated from a rat dorsal
reot ganglion cDMA library for use in Ohromosome mapping, forensic
medicine, monitoring clinical trials and therapeutics
